PALADIN HEAVY CONSTRUCTION

SUBJECT: JRB® Excavator Hydraulic Kit Swivels

Due to the increased hydraulic pressures of the Komatsu dash 7 excavators, JRB® has designed a modification for the coupler hydraulic kits for these machines. The issues regarding the higher pressures include swivels leaking and “locking up” or “freezing up”. A Manifold Conversion Kit has been developed to correct this problem. If you have a problem with swivels on a customers machine, call JRB® Customer Service at **1-800-428-2538**.

Call JRB Customer Service with your coupler serial number and your order will be shipped quickly.
Dealer net cost \$200.00.

The manifold conversion kit is shipped complete with instructions for installation. The labor for installation is typically less than two hours.

JRB Company, Inc., is committed to offering our customers the cutting edge of equipment. Our New Product Development Department is well ahead of the industry in defining and producing equipment for the 21st century.

For all your whole goods or parts needs, call us at **1-800-428-2538**.
